

CRESCENT RESOURCES LLC

201 Orange Avenue
Suite 720
Orlando, Florida 32801

I have been a major client of Performance Construction for the last 4 years. This company has provided my firm over this time with outstanding Construction Services. Crescent Resources and Performance Construction have built out in excess of 1 million square feet of tenant interiors in the Orlando and Lake Mary area.

With respect to project sizes. I would say that Performance Construction has done projects on the average of \$250,000 all the way up to several million. They have done an entire Corporate Headquarter Building interior for SAIC a Defense Company located in Research Park adjacent to the UCF campus which was valued at 3 million dollars, and they are currently completing another Corporate Head Quarter interior build out in Lake Mary for FARO Technology valued at 2.7 Million dollars. They have also done many fortune 100 Companies such as CICSO Systems, which was slightly over 1 million. Government Contracts such as General Dynamics which was approximately 1.7 million dollars to installing a full floor US Government Department of Defense installation complete with a 15,000 square foot raised floor Data center and High Security Laboratory installations.

I have found the staff of this firm to be courteous, polite, attentive, knowledgeable and always willing to do whatever it takes to make the client satisfied and happy with their construction. I would strongly recommend this firm for any projects you may be considering using them for, in that they have consistently over the years shown me that they can produce and are fully capable of accomplishing the task at hand.

I would not hesitate for a moment to recommend this firm to anyone requiring their services.
