To Whom It May Concern:

Subject: Recommendation letter for Performance Construction Group, Dustin Johns,
President

It is with pride that I provide this recommendation for Performance Construction Group, who is currently the preferred General Contractor for Science Applications International Corporation (SAIC's) Orlando operations. Performance takes care of our tenant improvement (TI) work as well as our remodeling work. Mr. Dustin Johns' company presents their abilities within the construction industry in a safe, responsible and professional manner. As the director of facilities for SAIC in the Orlando Florida area, I have had the pleasure to have worked with Mr. Johns directly on various tenant improvement projects totaling 170,000 RSF and approximately 30,000 RSF of remodeling of existing space.

In regard to Performance Construction's construction services for various SAIC buildings, Dustin, as the president of the company has personally taken time to meet with me with regard to issues that may come up and/or answer questions I may have in a timely manner. The superintendent's that are assigned to our projects take the time to ensure that all schedule milestones are met and within budget.

Over the past 8 years SAIC has worked with Mr. Johns on various projects. The first project together was at Science Drive which consisted of tenant improvements within a 85,000 sf new construction facility. At that time, Mr. Johns was the Project Manager responsible for managing the build-out. We subsequently have chosen Performance Construction for various other projects based on the great management of the Science Drive project including the following:

- Science Drive II - 83,000 sf tenant improvement project as a subcontractor to Brice Construction. Performance Construction was the primary TI contactor for this project. All schedules were met and within budget\
- 3050 Technology Parkway (The Pointe) - 20,000 sf remodeling of existing space and converting to manufacturing facility. Project is ongoing and we have not experienced any issues or problems to date. Anticipate an early November completion
- Orlando campus consolidation and compression - Performance Construction assisted us in various remodeling jobs here in the Central Florida Research Park (CFRP)

Should you have any questions with regard to this letter of recommendation, -please don't hesitate to contact the undersigned at 407.243.2721 or via e-mail at Richard.d.kaushagen@saic.com/

Sincerely,

A handwritten signature in black ink, appearing to read 'Rick Kaushagen', with a stylized flourish at the end.

Rick Kaushagen
Facilities Manager, SAIC
